## EDUCATION

---

**Shri Shankaracharya Professional University**

Computer Science Bachelor of Computer Applications (BCA)

Bhilai, Durg

2023 - 2025(Expected)

## SKILLS

---

|                        |                                                   |
|------------------------|---------------------------------------------------|
| Programming Languages: | JavaScript, Python, HTML5, CSS, C++, Java, C, SQL |
| Libraries/Frameworks:  | Bootstrap, Node.js, Express.js, Mongoose          |
| Tools / Platforms:     | Git, GitHub, VS Code                              |
| Databases:             | SQL, MongoDB                                      |

## PROJECTS / OPEN-SOURCE

---

### Quizzzy | [Link](#)

*JavaScript, Trivia API, CSS3, HTML5*

A web-based platform designed to engage users with various quiz questions.

- Built using HTML, CSS, and JavaScript with smooth animations for a seamless experience.
- Implemented a timer for each question to enhance user engagement.
- Integrated a dynamic scoring system providing real-time feedback.
- Fetched questions from the Open Trivia Database API, covering a wide range of topics.
- Showcased skills in interactive UI design, API integration, and creating an engaging user experience.

### Listify | [Link](#)

*JavaScript, CSS3, HTML5*

A simple and interactive web application for efficient task management.

- Developed using HTML, CSS, and JavaScript for a seamless user experience.
- Enabled users to add, edit, and delete tasks dynamically.
- Integrated input validation to prevent empty task entries.
- Featured a responsive, user-friendly interface with dynamic task list updates.
- Demonstrated expertise in DOM manipulation and responsive design for improved accessibility.

### Calculator | [Link](#)

*JavaScript, CSS3, HTML5*

A web-based calculator that allows users to perform basic arithmetic operations.

- Built using HTML, CSS, and JavaScript with a clean and intuitive UI.
- Supported operations include addition, subtraction, multiplication, and division.
- Featured dark and light theme switching for user preference.
- Validated user input to prevent invalid expressions and ensure accurate calculations.
- Showcased skills in responsive design and user interface optimization.

### News Fetcher | [Link](#)

*Python, News API, Request*

A Python-based application that fetches the latest news headlines from various countries and topics using the News API.

- Implemented using Python with libraries such as `requests`, `json`, and `win32com.client` for API requests and text-to-speech functionality.
- Features options to fetch top headlines from a specific country, a specific topic, or a combination of both.
- Provides the flexibility to either read the news on-screen or listen via text-to-speech.
- Integrates error handling for API requests and input validation to enhance user experience.

## CERTIFICATIONS

---

- Career Essentials in Software development - **Microsoft**
- JavaScript - **HackerRank**
